

## Environmental and Sustainability Work Sustainability Vision for MABI Sverige AB

*"To be a pioneer in environmental and sustainability efforts within our industry – and to contribute to more sustainable mobility for both people and society."*

At MABI Sverige AB, we strive to make a long-term, positive difference — for both our planet and our society. Our responsibility as an actor within the transport sector means that we actively work to reduce our environmental impact while simultaneously creating business value through sustainable solutions.

By integrating environmental and sustainability perspectives throughout our entire operation, we aim to:

- **Reduce our environmental impact:** We continuously work to lessen our ecological footprint through clear goals, measurable results, and sustainable actions. This includes more efficient use of resources, reduced waste, increased share of eco-labeled purchases, and investment in energy-efficient and climate-smart vehicles.
- **Offer sustainable services:** We develop solutions that help our customers reduce their environmental impact. Through digitalization and smart coordination, we create more sustainable and efficient transport services, with sustainability as a natural part of our business strategy.
- **Set requirements throughout the value chain:** We ensure that our suppliers and partners share our view on the environment and sustainability. By choosing partners who act responsibly, we can together contribute to a more sustainable industry.
- **Engage and educate our employees:** We see our staff as key to our sustainability work. Through training, participation, and practical tools, we create the conditions for every employee to contribute — both in the workplace and in society at large.
- **Contribute to the local community:** We aim to be a positive force wherever we operate and to support initiatives that promote sustainable development. It is about taking responsibility — locally as well as globally.

By realizing this vision, MABI aims to be a leading player in sustainable mobility. We are convinced that a strong focus on environmental and sustainability efforts not only benefit the environment but also strengthens our competitiveness and long-term success.
